## Shared Care Pathway for Soft Tissue Sarcomas Presenting to Site Specialised MDTs (measure 14-1C-117I)

### Urology – Version 1

#### Background

The purpose of this guidance is to define how patients that present to local urology cancer services with soft tissue sarcoma (STS) are managed, and the relationship that should exist between the Specialist Urological Multi-Disciplinary Team (MDT) and the Specialist Soft Tissue Sarcoma MDT.

Specialist services for STS in the SWAG region are provided by the Sarcoma Cancer services at [North Bristol Trust](#).

Specialist services for Urology in the SWAG region are provided as detailed in the SWAG Urology SSG [key documents](#).

#### Principles

This guidance has been developed in accordance with the relevant measures within the Manual for Cancer Services: Sarcoma Measures (Version 1.1) and the Manual for Cancer Services: Urology Measures (Version 1.0).

#### 1) Notification

All STS patients presenting to a local or specialised Urology MDT should be notified to the specialist STS MDT in North Bristol Trust. This should be documented in the local urology cancer MDT operational policy.

#### 2) Review by STS MDT

##### a) Pathology

All urology STS will have pathology review undertaken by the nominated specialist sarcoma pathology service (for details see the MDT operational policies).

##### b) Treatment planning

All new STS diagnoses will be referred to the STS MDT for treatment planning. Early referral from the time of suspicion or biopsy is recommended.

### 3) Site of Definitive Treatment

Discussion between MDTs will take place to determine the appropriate hospital for definitive excision. Initial surgical treatment may be undertaken by the local or specialist urology team. It is preferred that complex surgery, i.e. multivisceral resection or operations requiring complex reconstructive procedures and second operations, take place at a hospital hosting the Specialist STS MDT. In the case of Urology at North Bristol NHS Trust, the urologists are core members of the sarcoma STS MDT and therefore are present at both MDT's which facilitates the management of these patients. Nominated surgeons are Mr Tim Whittlestone and Mr Salah Albuheissi.

Chemotherapy and radiotherapy will be undertaken by designated practitioners as agreed by SAG.

### 4) Recurrence

All recurrent urology STS will be discussed and reviewed by the STS MDT.

### 5) Follow up

Follow up arrangements will be discussed and agreed between the local Urology MDT and the STS MDT. This will include details of frequency, purpose and location of follow up. Follow up under the care of the urologists with a special interest in STS(i.e. retroperitoneal sarcoma) is under the auspices of the sarcoma clinic at NBT.

### 6) Summary of Roles and Responsibilities

Roles and Responsibilities		
	Specialist / Local Urology MDT / Clinic	Sarcoma MDT / Clinic
Presentation	Assess new cases of suspected retroperitoneal/pelvic/abdominal sarcoma. Notify STS MDT of all new cases of retroperitoneal/pelvic/abdominal sarcoma.	
Diagnosis	Refer all cases of urology sarcoma for pathology review. Refer all new cases of retroperitoneal/pelvic/abdominal sarcoma for review by the STS MDT.	Review pathology of all new cases of urology sarcoma.  Clinical review of all new cases.
Treatment	Initial surgery. Consultant	Complex surgery and second

South West Strategic Clinical Network  
Somerset, Wiltshire, Avon and Gloucestershire (SWAG) Cancer Services  
**Bristol Sarcoma Advisory Group (SAG)**

	Urological Surgeon, Mr. Tim Whittlestone or Mr Salah Albuheissi. (TW/SA)	operations (TW or SA). All chemotherapy and/or radiotherapy under the care of oncologists at BHOC.
Follow up	Follow up in accordance with agreed Urology/sarcoma MDT guidelines.	Follow up in accordance with STS follow up guidelines of all patients treated by the STS MDT.

### 7) Referral to Palliative Care

Palliative care services will be made available to all patients as deemed appropriate by the MDT.

### 8) Patient Information and Counselling

All patients and, with their consent, their partners, will be given access to appropriate written information during their investigation and treatment, and on diagnosis will be given the opportunity to discuss their management with a clinical nurse specialist who is a member of the relevant MDT. The patient should have a method of access to the urology/sarcoma MDT at all times.

Access to psychological support will be available if required. All patients should be offered a holistic needs assessment and onward referral as required.
